

Grass Fed Skin

TALLOW BASED SKINCARE

Discover the benefits of this ancestral skin care method

Moisturizing

Tallow is rich in natural fatty acids that are similar to those found in human skin. This similarity works on the cellular level, providing **long term nourishment and hydration**.

Skin Health

Tallow contains vitamins such as A, D, E, and K, along with essential fatty acids. These nutrients can promote skin health and have anti-aging, collagen producing benefits.

Anti-Inflammatory

Being **anti-inflammatory, anti-fungal and anti-microbial** paired with having a potent fatty acid profile, tallow can help soothe and calm inflamed or irritated skin.

Non-comedogenic

Tallow is **non-comedogenic**, meaning it does not clog pores, often the cause of acne breakouts. This makes it suitable for various skin types including acne prone skin.

Hypoallergenic

Tallow is well tolerated by most individuals and can provide **relief for individuals with sensitive skin**, including those experiencing Eczema, Psoriasis, Rosacea and other skin conditions.

What makes our tallow products different

Thoughtfully Sourced

We value supporting our **local farmers** to protect and enhance natural resources, the environment and our local economy. Our **100% grass fed and finished tallow** is intentionally sourced from farms who follow antibiotic free, hormone free and vaccine free practices.

Crafted with Care

No massive warehouses and bulk production here. We hand crafted each product in-house in small batches to preserve freshness and bioavailability.

Heated ingredients are handled with stainless and glass equipment to eliminate microplastic exposure.

Family Owned and Operated

Our family run business began with a **mother's dedication** to maintaining a non-toxic environment in the home and need for effective skin care. All of our products are held to the standard of what we would ideally use on ourselves and our children.
